Embedding Twitter Widgets in Your Homepage in D2L

1. A Twitter account is required to embed Twitter data into Desire2Learn.

2. Navigate to Google homepage, and enter twitter.com/settings in the address bar.

3. After logon in to your Twitter account, click **Widgets** to customize and construct your Twitter widget. Twitter widget will be embedded into Desire2Learn.
4. Click **Create new** and customize the parameters for your widget.

5. Twitter widgets should be relevant to your class and reflect the content of your course. Click **search**.
6. Enter **Search Query** in the space provided. Live preview reflects the content of the widget. Alter the appearance and other parameters as you see fit.

7. Click **Create widget** button to generate the widget code.
8. Select the widget code and Copy.

You should now know how to use Twitter to create a widget showing a particular stream of data (tweets from a person or people, tweets with specific hashtags, etc.) how to customize the widget, and how to generate the code that must be embedded into Desire2Learn.
